Introduction

Shimmer3 GSR+ unit provides connections and front-end amplifications for one channel of Galvanic Skin Response (GSR) data acquisition (Electrodermal Resistance Measurement - EDR). Compatible with the Shimmer3 platform, the GSR+ also boasts an additional 3.5 mm connector for 2 extra channels of analog or digital data capture.

Product Overview

The Shimmer3 GSR+ unit addresses challenges of mobility and provides high quality, scientifically reliable data. The Shimmer3 GSR+ unit monitors skin conductance between 2 residual electrodes attached to 2 fingers on one hand.

The 35 mm jack 3 V connector allows users to connect and power an external/third party device, supporting an extra 2 channels of analog or digital data acquisition. The GSR+ unit is compatible with the Shimmer3 platform and hardware. All development tools and enabling applications are compatible with the Shimmer3 platform.

Applications

Affective computing and cognitive factors
Connected/digital health solutions
Stress detection and analysis Emotional engagement
Psychological arousal (excitement, mental effort, shock, etc.)
Marketing research
Weight and nutrition management
